Medical Professionals:

Improve outcomes by connecting nurses, patients, care-takers and practitioners

Tree.st is a private community search tool for organizations that enables medical professionals to discover and connect with each other based on criteria specific to your institution.

My colleagues and I can now find each other across the hospital and compare similar cases to make better decisions and improve patient outcomes.

Esther
Registered Nurse at a Major Hospital

Feature	Solution	Benefit
Detailed Employee Profiles	Medical professionals can create directory profiles with hospital-specific criteria such as expertise, department, availability, and professional affiliations	Hospitals can provide their employees with rich information about each other on the web, thus increasing connections between and amongst medical professionals
Extensive Employee Search Engine	Doctors and nurses can obtain better, more timely advice and search for one another based on any combination of specific criteria. Access to fast changing medical knowledge is more structured and systematized	Employees can identify colleagues with specific roles, skills, or backgrounds in order to seek help, inform them of opportunities, or ask questions and receive answers. This can enhance knowledge sharing within a company and lead to higher productivity
Medical Analytics	Hospital management can analyze resource utilization and patient outcomes based on user profiles to save both costs and lives. Reduce the dangers posed by medical errors	Management can better understand their employees and create new career opportunities, events, and trainings tailored to their employees skills and needs. This can help companies better allocate precious resources.
"Smart" Groups	Automatically group medical professionals by specific criteria such as expertise, interests, contacts, and availability	Employees can contact specific colleagues within their company based on specific skills, interests, or expertise. This allows employees to share opportunities and resources with colleagues
